TIBCO RTView for TIBCO Enterprise Message Service

BENEFITS

ENHANCED VISIBILITY
Significantly enhance visibility into your TIBCO Enterprise Message Service infrastructure, as well as your ability to proactively respond to emerging conditions.

FAST TROUBLESHOOTING
Speed resolution to exceptional conditions by leveraging alerts and thresholds, and by automating responses to alerts.

HISTORICAL CONTEXT
Provide greater context for monitoring information by saving data to an historical database, and comparing historical trends to real-time metrics.

FLEXIBILITY
Achieve optimal performance and reliability by proactively configuring infrastructure parameters and leveraging caching functionality.

CAPACITY PLANNING
Effectively plan for capacity of your messaging servers.

FAST DEPLOYMENT
Quickly deploy a comprehensive monitoring solution with sophisticated, pre-configured, out-of-the-box displays.

OPTIMIZATION
Optimize performance, eliminate bottlenecks, and enhance stability through monitoring platform-, server-, transaction-, and message-level status and information.

TIBCO’ RTView’ for TIBCO Enterprise Message Service™ is an out-of-box solution that enables TIBCO Enterprise Message Service™ teams to track the health and performance of their messaging infrastructure, use historical context to gain early warning of issues, and effectively plan for capacity of their TIBCO Enterprise Message Service servers.

The effective monitoring and provisioning of your TIBCO Enterprise Message Service infrastructure can greatly reduce costs associated with application degradations and hardware/software investments. Equally important, it can help you to ensure the highest level of performance of the business services that depend on TIBCO Enterprise Message Service.

TIBCO RTView for TIBCO Enterprise Message Service enables you to continually assess and analyze the health and performance of your messaging middleware, gain early warning of issues with historical context, and effectively plan for capacity of your TIBCO Enterprise Message Service servers.

You can benefit from a broad array of out-of-the-box dashboards, rules, and alerts that can be configured to deliver exactly the information each of your teams require. TIBCO RTView for TIBCO Enterprise Message Service also provides sophisticated analytics capabilities to aggregate data, perform functions on metrics, and give meaning to large volumes of performance data.

ATTRIBUTES & CAPABILITIES

• Pre-defined, out-of-the-box alerts.
• Historical trend analysis that can be compared to real-time data for analysis and reporting.
• Comprehensive, pre-configured displays providing numerous out-of-the-box views into the health status of your TIBCO Enterprise Message Service infrastructure.
• Auto discovery of routed instances to generate message flow topology and display real-time hot spots using heat maps.
• Several deployment options — via a Web browser as an interactive AJAX thin client, as a Java application or applet, or via an enterprise or TIBCO portal — all making use of TIBCO RTView for TIBCO Enterprise Message Service comprehensive security features.
