

TIBCO Foresight® software

Benefits

- Achieve compliance with CMS Interoperability rules
- Reduce administrative complexity
- Make smarter decisions with validated data

Healthcare is one of the most complex industries in the world with stringent governmental regulations for managing and sharing patient data. With TIBCO Foresight® software, users can address these difficulties head on. As a comprehensive and cost-effective data management solution, TIBCO Foresight streamlines burdensome healthcare administrative processes, while being in full compliance with changing regulatory requirements—including the latest CMS Interoperability and Patient Access requirements.

Time and cost savings with digital standardization

Labor-intensive administrative work is a burden on your staff and can significantly erode your bottom line. Fortunately, TIBCO Foresight streamlines your critical process and reduces the burden of manual administrative tasks—while staying in full compliance with the latest regulatory requirements. TIBCO Foresight provides a variety of benefits:

Streamlined operational processes

Lower administrative costs by eliminating inefficient manual labor. Automate and optimize various critical business processes including claims management, enrollment management, claims payments, and more. Continually manage and monitor your processes to identify future opportunities for operational optimization.

Simplified regulatory compliance

Fully comply with CMS Interoperability and Prior Authorization Final Rule (CMS-0057-F) with powerful FHIR integration and data management. Easily publish healthcare data as FHIR resources that are compatible with Patient Access API, Provider Access API, Payer-to-Payer API, and Prior Authorization Improvement Rules.

Better business decisions

Validate data exchanged with trading partners to ensure best business and medical decisions are being made. By combining the industrial data management strength of TIBCO Foresight with state-of-the-art FHIR tools, be assured that your patient data is accurate, reliable, and consistent.

Secure access and critical data

Easily discover complete patient data by pairing related documents, such as eligibility, prior authorizations, claims, and attachments in a highly compressed repository. Adjudicate claims faster by easily sending full clinical attachments to trading partners.

Improved trading community

Once you have implemented a digital EDI solution, you must increase your partner trading community. TIBCO Foresight Community Manager is a secure online testing portal that will accelerate partner onboarding. Your partners can easily test their EDI readiness without support from your staff.

Reduced infrastructure costs

If you already have an on-premises EDI solution, you know it's critical to your business. It can be, however, costly to maintain an on-site system. TIBCO Foresight allows you to deploy your EDI services in the cloud using docker containers, reducing your total cost of ownership.

TIBCO healthcare solutions

TIBCO offers several components to address the requirements of various market parties that need to comply with localized regulations from different governing groups—and for those who use a variety of backend applications, systems, and file or message transport mechanisms.

EDI-based TIBCO solutions:

TIBCO Foresight® Instream®

Automate EDI transaction flows and validate transactions according to industry standards, organizational guidelines, and specific business rules. It's the most complete and flexible solution in the market for complying with HIPAA's privacy and security standards.

TIBCO Foresight® Transaction Insight®

Manage your transaction life cycles (e.g., claims processing) by providing visibility and control over your EDI transaction lifecycle through advanced reporting, secure portal technology, and facilitated research capabilities.

TIBCO Foresight® HIPAA Validator®

Check data against both published and customized company guidelines. It can be used as a standalone product or work in conjunction with TIBCO Foresight Instream.

TIBCO Foresight® Translator Attachment Adapter

Exchange full clinical documents with trading partners.

TIBCO Foresight® Archive and Retrieval System

Archive EDI transaction sets, documents, and attachments—but then later retrieve them along with any related files, using a secure web portal. It also provides advanced search functionality and access to web services.

TIBCO Foresight® Community Manager®

Implement and manage large, diverse communities of trading partners with a web-based solution. Healthcare partners can easily self-test their EDI data—securely, reliably, and without assistance.

TIBCO Foresight® Corrections Manager

Correct and validate claims, enrollments, and payments.

TIBCO Foresight® MAC Adapter

Comply with the strict requirements of CMS' Common Edits Module with a specialized translation adapter for Medicare Administrative Contractors (MACs).

TIBCO Foresight® REST API

Use a simple web application to expose the TIBCO Foresight Instream and TIBCO Foresight Translator Attachment Adapter REST APIs for any application or partner that requires validation and translation services.

TIBCO Foresight® BI Bridge

Use a specialized extract, transform, and load (ETL) tool to get the most from the TIBCO Foresight Transaction Insight transactional database.

FHIR-based TIBCO solutions:

TIBCO Foresight® Transaction Insight® Manager for FHIR

Monitor and manage FHIR ETL functionality by allowing users to collect, view, correct, and delete FHIR resources. Additionally, provide statistics for each of the CMS Interoperability rules.

TIBCO BusinessWorks™ ActiveMatrix Plug-in for HL7 with FHIR

Exchange FHIR data with clinical software applications within TIBCO BusinessWorks. Integrate FHIR data with other systems by parsing, encoding, and routing FHIR resources.

TIBCO Foresight® Connect with FHIR (Alpha edition)

Establish a secure pipeline between external partners and your internal healthcare applications to retrieve clinical documents on demand. Subscribe to patient data and receive automatic updates to keep patient data up-to-date.

TIBCO FHIR servers

All TIBCO FHIR products are compatible with any FHIR server. The HAPI FHIR server ships with each product, however, for customers who want a more powerful FHIR server, TIBCO has formed partnerships with Smile Digital Health and Eden Lab.
