

TIBCO Scribe Online

Empowering users with simple,
agile, and secure integration

What is TIBCO Scribe® Online?

TIBCO Scribe Online is a cloud-based integration service that enables businesses to efficiently connect applications and automate data flows through a fast, intuitive, browser-based interface. Built on a powerful integration engine and a rich library of intelligent connectors, it acts as a bridge between diverse systems and data formats—enabling seamless data movement, faster integration creation, and simplified management.

Why choose TIBCO Scribe Online?

TIBCO Scribe Online meets modern business requirements with maximum flexibility—enabling faster integrations, empowering users, and driving innovation with agility and control. With TIBCO Scribe Online, enterprises can quickly deploy, monitor, and maintain integrations across cloud and on-premises environments.

- **Create how you want:** Build integrations faster using a visual drag-and-drop mapper with pre-coded block operations—ideal for collaborative, low-code, and no-code development.
- **Extend how you want:** Accelerate integration projects with a rich library of pre-built connectors. Extend connectivity through REST Connect and custom connector extensions to meet unique integration requirements.
- **Deploy how you want:** Achieve universal deployment and monitoring across on-premises and cloud environments. Deploy integrations on AWS or Azure with data centers in Europe, the US, and Australia.
- **Operate securely and efficiently:** Use on-premises and cloud agents to control data movement. Use unlimited organizations to separate integration projects or create dev, test, and production environments.

How TIBCO Scribe Online works

At the core of TIBCO Scribe Online is the TIBCO Scribe Agent, a lightweight, secure service that manages communication between your data sources. It works securely behind your firewall to ensure your data is moved safely. Integrations in Scribe Online are structured as Solutions, which include an Agent, mapping instructions, and connection information, all working together to move data efficiently from one datastore to another. Each Solution type offers different functionality and options:

☐ Replication Services (RS)

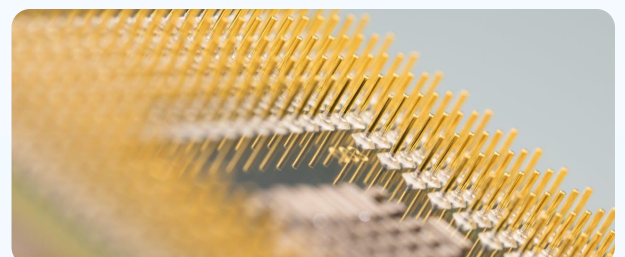

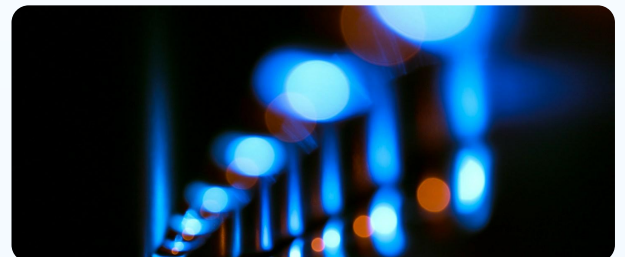

Copy data from one source to another for consistency.

☐ Integration Services (IS)

Integrate data from a source into one or more target systems.

☐ Integration Event Solution (IS)

Integrate data triggered by calls to a Web Service.

TIBCO Scribe Online benefits

Fast, responsive UI

Experience a modern, browser-based UI that ensures quick navigation, smooth performance, and reduced development time.

Rich connector library

Take advantage of 48 Scribe-built connectors and 32 TIBCO Partner connectors. With Connector Extensions, add specialized tools to enhance Maps or use a specific technology to access systems that do not have a matching connector.

Built on publicly available APIs

Harness the power of publicly available APIs for seamless integration with external tools, automation capabilities, extensibility, and custom workflow support.

Unlimited organizations and agents

Create unlimited organizations to separate integration projects or define dedicated dev, test, and production environments. Get maximum scalability with support for unlimited systems and agents.

Optimized data processing

Process as many rows of data as needed within connector and solution specifications without additional subscription costs.

Dashboard and central management

Use the intuitive dashboard to manage agents, create solutions, and monitor all integrations in one place for complete visibility and control.

 Flexible user access

Get unlimited user seats with role-based access—admin, user, and read-only—for collaborative and controlled integration management.

 Visual low-code integration (Maps)

Design integrations using a visual drag-and-drop interface with pre-coded blocks. Get support for integration, message, and request/reply map types for faster development.

 Execution history and insights

Maintain a 45-day history of execution logs, including processed and failed records, duration, and status, for transparency and troubleshooting.

The advantage of TIBCO Scribe Online

TIBCO Scribe Online enables users to create, manage, and maintain integrations faster and at a lower cost. With a rich library of pre-built connectors, all-in-one monitoring and management, and a visual, low-code design, it simplifies complex integration tasks while reducing development time, cost, and operational overhead.
