Compared to other middleware platforms, the developer productivity improvements we are seeing are very, very significant, between 20 to 35%.

— Apps Associates, IT service and solution provider

Modern platform.

With microservices, process apps, and IoT edge computing, TIBCO® Connected Intelligence Cloud supports pervasive integration and modern app development, preparing you to quickly innovate and reach new audiences. TIBCO led the market with multi-cloud integration and containerized deployments, and is also the first to work with AWS Lambda serverless computing, providing function-as-a-service (FaaS) scaling with high availability and zero administration. With full application portability across AWS Lambda in the cloud or AWS Greengrass and other IoT devices at the edge, you can reduce function development time, operating costs, and time.

“In the Cloud, the cycle time to deploy infrastructure and make it available for experimentation leads to much faster solutions that the business can test with clients. We see third-party startups creating services from a combination of different providers. With APIs that sit on the edge, you can really wire together multiple services to create much more compelling business outcomes and revenue streams.”

— Digital Nebula, financial services consultancy

True open source innovation.

TIBCO’s core next-generation integration and API technologies are truly open source, without any functional or technical limitation, and with portability between open source and commercial offerings. Our Project Flogo® is the only open source microservices framework that runs on low-resource devices, such as IoT sensors, and can execute machine learning models to build smarter functions that run at the edge.

“We’re providing real-time services all over the house and making it smart, really smart. We started in Switzerland, Austria, and Germany, and we’re now expanding through Europe and into megacities in Asia — to countries depending on their openness to smart homes. With our back-end systems, it’s no concern if we grow fast.”

Proven experience at enterprise scale.

TIBCO has over 20 years’ experience in mission-critical application integration, with a solution portfolio that will grow with you to enable sustainable competitive advantage. Over 10,000+ customers chose TIBCO technology for digital transformation because it extends beyond connectivity to cloud, IoT application services, analytics, and machine learning. TIBCO now leads the broader category of digital transformation with a middleware-as-a-service platform supporting analytics, APIs, hybrid connectivity, IoT application services, and machine learning. With over 200 reviews and an average rating of 8.2 on TrustRadius, TIBCO customers see the benefits of our solutions.
