

TIBCO Cloud Integration connector endpoints

AT A GLANCE

TIBCO universal connectors help IT organizations integrate on-premises applications, databases, and other technologies with SaaS, mobile, and IoT solutions.

WIDE SELECTION OF PLUG-INS AND CONNECTORS

Every organization relies on a complex mix of packaged and custom applications, databases, and technologies. TIBCO provides 200+ connectors to extend connectivity for integrating on-premises with SaaS applications, IoT devices, and mobile environments. It makes it easy to unlock and share valuable information using various data formats over many protocols.

BENEFITS

ENTERPRISE READY

- Scalability and High Availability: Out-of-the-box reliability eliminates the need for expensive hardware, software, and maintenance support.
- Multi-threaded Design: Multiple sessions can communicate bi-directionally with each other from a single interface.
- Application Routing: The interface supports triggers that enable CICS applications to publish or redirect output to external applications where orchestration can be performed by TIBCO Cloud™ Integration.

FASTER PERFORMANCE

- Improve system performance by eliminating repetitive batch requests for information and updates.
- High volume trigger (HVT) makes it possible to support large message volumes.

EASIER MANAGEMENT

- Monitor connections with one standardized user interface.
- Simplify user administration of the integration environment through subject naming that eliminates the need to specify senders and recipients.

SDK FOR BUILDING CUSTOM CONNECTORS

TIBCO Connectors Software Development Kit helps IT organizations build connectors for custom or specialized applications.

- Reduces cost of integration using templates.
- Helps IT staff create custom connectors using infrastructure that enables the rich functionality and proven performance of packaged connectors.
